SUMMARY

Senior Software Engineer with a strong frontend background and full-stack experience. I build customer-facing products with React, TypeScript, and Node.js, with a focus on software architecture, performance, and polished user experiences. I enjoy owning problems end-to-end and working closely with product and design to take ideas from early decisions through to production.

EXPERIENCE

Webflow | Senior Frontend Engineer | Jan 2025 – Present

- Led technical delivery of Webflow Designer's information architecture redesign across navigation and CMS workflows, shaping implementation approaches across engineers and partnering with product and design from Alpha through GA; achieved a UMX score of 74 against a target of 70.
- Architected and built a type-safe, config-driven keyboard shortcut system supporting permissions, feature flags, conflict detection and extensible command handlers, replacing a hard-to-maintain single-file implementation.
- Built reusable components across Webflow's Spring design system and virtualized high-volume list experiences, improving consistency and rendering performance across complex Designer workflows.
- Owned frontend delivery for the first phase of Webflow's Multi-context Canvas from Alpha through GA, evolving the Designer from a single-scroll experience toward a performant pan-and-zoom canvas supporting multi-frame rendering across responsive breakpoints.
- Strengthened frontend quality and CI reliability during the Cypress-to-Playwright migration, fixing 40+ flaky tests, tracking quarantined failures and expanding end-to-end coverage of critical product workflows.

Google (Contract) | Web Solutions Engineer | Oct 2024 – Dec 2024

- Built full-stack features for an internal platform used by customer success teams to support customer adoption of Google products.
- Developed dashboard experiences in Angular and backend services in Java and Kotlin, supporting customer workflows, service configuration and operational reporting.

Parklane | Co-founder / Tech Lead | Feb 2024 – Oct 2024

- Co-founded and led engineering for Timeline and WDYT, taking both consumer social products from concept through architecture, development and App Store launch.
- Led two engineers while owning mobile architecture, Firebase schema design, code reviews and technical direction across both products.
- Designed and implemented a contact-ranking engine and social graph model using interaction signals, mutual connections and contact metadata to power personalised recommendations and friend discovery.
- Built highly interactive mobile experiences with React Native and Reanimated, delivering performant animations and polished user interactions.

Qatalog | Frontend Engineer | Apr 2022 – Feb 2024

- Built Qatalog 2.0's generative AI-powered product experiences, translating AI-generated workflows into responsive, interactive interfaces and reusable frontend patterns.
- Reduced search query response time by 20% and increased user satisfaction with search by 40% by using

WebSockets to deliver a faster, more responsive Qatalog AI Search experience.

- Reduced subsequent feature development time by 50% by designing and building reusable foundational components for posts, pages and tasks across Qatalog 1.0.
- Owned and contributed to MOSAIQ, Qatalog's component library built with React, TypeScript, Styled Components and Storybook.
- Reduced mobile bounce rates by 20% through responsive frontend optimisation.

Nomba (YC W17) | Senior Frontend Engineer | May 2021 – Apr 2022

- Led development of Nomba Marketplace, used by 150,000+ businesses and processing more than \$1M in transaction revenue monthly.
- Increased checkout completion by 15% and user satisfaction by 20% through A/B testing and optimisation of payment flows.
- Reduced frontend bug reports by 30% by expanding unit and integration test coverage and preventing regressions.

TECHNICAL SKILLS

Frontend: React, TypeScript, JavaScript, Next.js, React Native, Angular, HTML, CSS, Styled Components, Tailwind CSS

Architecture & Data: Frontend Architecture, Component Architecture, Design Systems, State Management, Performance Optimisation, GraphQL, REST APIs, Apollo, Zustand, Redux Toolkit, React Query, WebSockets

Testing & Tooling: Playwright, Cypress, Jest, React Testing Library, Storybook, Vite, Unit Testing, Integration Testing, End-to-End Testing

Backend & Infrastructure: Node.js, Java, Kotlin, PostgreSQL, Redis, Firebase, Docker, AWS

EDUCATION

B.Sc. Computer Science, University of Lagos | CGPA: 4.6/5.0
